

12. The diagram below shows the set-up used to burn hydrogen and collect the product.

(a) Why is hydrogen not readily used as a fuel?

(1mk)

It's explosive when mixed with air and ignited.

(b) State one use of hydrogen gas.

(1mk)

- Manufacture of  $\text{NH}_3$  /  $\text{HCl}$

- Hardening of oils

- ~~Rocket~~ Rocket fuels

13. a) State Charles' Law.

(1mk)

The volume of a given mass of a gas is directly proportional to its absolute temp. at constant pressure.

b) A certain mass of a gas occupies  $150\text{cm}^3$  at  $281\text{K}$  and  $109.41\text{kPa}$ . What will be its

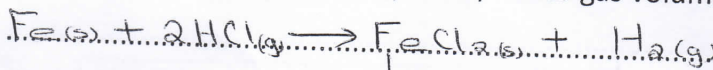

temperature if its volume is reduced by  $16\text{cm}^3$  at  $101.325\text{kPa}$ .

(2mks)

$$\frac{281 \times 134 \times 101.325 \text{ kPa}}{150 \times 109.41 \text{ kPa}} = 232.5 \text{ K}$$

$$150 \times 109.41 \text{ kPa}$$

14. 3g of iron reacted with hydrogen chloride gas at S.T.P. Calculate the volume of the hydrogen chloride gas used. ( $\text{Fe}=56$ , Molar gas volume at s.t.p= $22.4\text{dm}^3$ ) (2mks)

$\frac{3}{56} = 0.0534 \text{ moles}$	Fe : HCl	$\frac{0.1068}{1} \times 22.4 \text{ dm}^3$
	1 : 2	= $2.39 \text{ dm}^3$

15. Under certain conditions, chlorine gas reacts with sodium hydroxide to form sodium hypochlorite.

a) Name the conditions under which sodium hydroxide reacts with chlorine to form sodium hypochlorite.

(1mk)

Dilute NaOH

Cold NaOH

b) State one use of sodium hypochlorite.

(1mk)

Used for water purification

Bleaching agent
