PART A

- **1.** You are provided with the following:
 - One dry cell in a cell holder
 - One milliammeter
 - A resistor labelled R1
 - A chain of six resistors
 - A switch
 - Connecting wires

Proceed as follows:

(a) Set up the circuit as shown in Figure 1

Switch on the circuit to obtain a positive deflection in the milliammeter. Record the reading I_1 of the milliammeter.

(1 mark)

(1 mark)

 $I_1 = \dots MA$

(b) Remove the crocodile clips from the ends of the chain of resistors and connect them across two resistors in the resistance chain that add up to 3.0 k Ω . Record the reading of the milliammeter I₂.

 $I_2 = \dots mA$

(c) Repeat the procedure in (b) for other values of resistance R shown in **Table 1** and complete **Table 1**.

(Hint: The values of R may be obtained by combining two or more resistors in the chain)

	 i) Give (I) 	i) Given the equation E (I) E.	i) Given the equation $E = I(R+R_1)$ determine the values of (I) E. (II) R. (II) R.

NB: The plain sheet of paper must be submitted together with the question paper.

(b) At a point about a thirdway along one side of the outline from angle A, draw a normal.

(2 marks)

(c) Draw a line at angle $i = 40^{\circ}$ to the normal. Stick two pins P_1 and P_2 vertically on this line. (see Figure 3).

Place the prism accurately on the outline. By viewing through the opposite side, stick two other pins P_3 and P_4 vertically such that they are in line with the two images of pins P_1 and P_2 .

(d) Remove the prism and the pins. Draw a line joining the marks made by P_3 and P_4 . Extend lines $P_1 P_2$ and $P_3 P_4$ to intersect. Hence measure the angle of deviation D.

D =

- (1 mark)
- (e) For two other values of angle i shown in **Table 2** locate and measure the corresponding angles of deviation. Complete **Table 2**.

Table 2

•			(2 m	arks)

D			00	
D				1
				1

(f) (i) Determine the average value D_m of D. (1 mark)

Kenya Certificate of Secondary Education, 2017 232/3 (ii) Determine the constant K using the equation; (3 marks) $k = \frac{\sin(\frac{A+D_m}{2})}{\sin\frac{A}{2}}$

PART B

8

(Read all the instructions before starting this part)

(g)	Using the thermometer measure and record the temperature of the room °.	
	° =°C	(1 mark)
(h)	Using the 250 ml beaker, collect 200 ml of hot water from the boiling water so the thermometer into the hot water and wait until the water cools to 80 °C then stopwatch and record the time t_1 it takes the water to cool to 75 °C.	
	$t_1 = \dots seconds$	(1 mark)
(i)	Wait until the water cools to 70 °C then start the stopwatch and record the time the water to cool to 65 °C.	t ₂ it takes
	$t_2 = \dots seconds$	(1 mark)
(j)	Determine the rate of temperature change X and Y in the two time intervals;	
	(I) $X = \frac{77.5 - \theta_0}{t_1}$,	(2 marks)
	A LA	
	(II) $Y = \frac{67.5 - \theta_0}{t_2}$.	(2 marks)
		•••••
(k)	State with a reason how the rate of change of temperature between 90 °C to 85 compares with X .	°C (2 marks)
	THIS IS THE LAST PRINTED PAGE.
