

5.3.2 Biology Paper 2 (231/2)

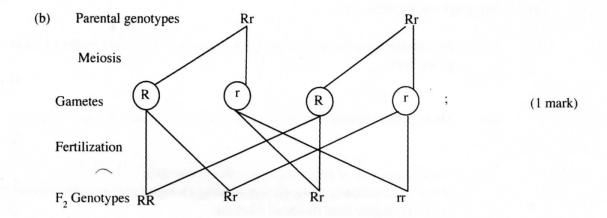

1.	(a)	(i)	В	Seta/stalk;	1 mark			
			D	Rhizoid;	1 mark			
		(ii)	A	Production of spores/sporulation;	1 mark			
		()	C	Photosynthesis;	1 mark			
	(b)	(i)	Arthropoda; 1 mark					
	(0)	(ii)	-	Segmented body;				
		(11)	_	Jointed appendages;				
			-	Presence of exoskeleton	3 marks			
2.	(a)	E	Semi	circular canals;				
۷.	(a)	F		window/Fenestra ovalis/Fenestra vestibuli;				
		G	Coch		3 marks			
		G	Cocii	ica,	3 marks			
	(b)	(i)	Linea	d with hair/secretion of wax/(has glands that secrete	wax) to trap foreign			
	Hollow/tubular/tube; to direct sound waves to the ear				m/tympanum/tympanic			
	membrane;							
					(max) (2 marks			
*		(ii)	Smal	l/form a lever system/solid; to amplify (sound) vibra	ations; (2 marks)			
	(c) Deafness/ absence of pinna/ vertigo/tinnitus; (max) (1 mar							
3.	(a)	(i)	Provides energy needed to split water molecules into oxygen and hydrogen/photolysis;					
			Provides energy for formation of ATP molecules (which is used in dark stage) (1 mark)					
		(ii)	Com	bines with hydrogen ions to make glucose;	(1 mark)			
		(iii)	Used	I to trap light energy;	(1 1-)			
		(111)			(1 mark)			
	(b)			th:	(1 mark)			
	(b)	(i)	Starc					
	(b)				(1 mark)			
	(b) (c)	(i)	Starc					
		(i) (ii)	Starce Prote	ein;	(2 marks)			
		(i) (ii) (i)	Stard Prote Lack	ein; c of vitamin B1/thiamine;	(2 marks) (1 mark)			
		(i) (ii) (i)	Stard Protes Lack - Stu - Pa	ein; a of vitamin B1/thiamine; unted growth;	(2 marks) (1 mark)			
		(i) (ii) (i)	Starce Protes Lack - Stu - Pa - He	ein; s of vitamin B1/thiamine; unted growth; ralysis of legs/arms/limbs/damage to peripheral nerv	(2 marks) (1 mark)			
		(i) (ii) (i)	Stard Protes Lack - Stu - Pa - He - Sw	ein; c of vitamin B1/thiamine; unted growth; ralysis of legs/arms/limbs/damage to peripheral nerveart failure velling of feet/oedema	(2 marks) (1 mark) res;			
		(i) (ii) (i)	Stard Protes Lack - Stu - Pa - He - Sw - Ga	ein; t of vitamin B1/thiamine; unted growth; ralysis of legs/arms/limbs/damage to peripheral nerveart failure	(2 marks) (1 mark) res;			

4. Parental phenotypes (a) Smooth Wrinkled

First filial (F1) generation Rr Rr Rr ; Rr

(3 marks)

- (i) Genotypic ratio

(1 mark)

- Phenotypic ratio (ii)
- 3 smooth coats
- 1 wrinkled coat;

(1 mark)

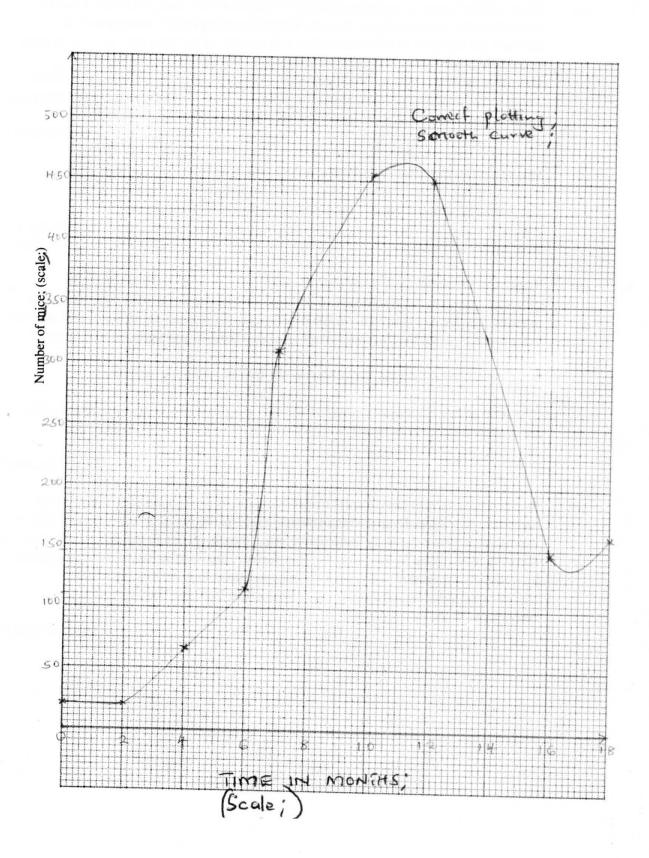

(c) The total number of wrinkled seeds.

> $1/4 \times 14,640 =$ 3660

(2 marks)

5.	(a)	(i)	 H - It is long/wide/broad/flat; to provide a large surface a attachment of muscles; 						
			- Has facets; for articulation with sacrum;	(2 marks)					
		(ii)	J Has flexible cartilage; which allows for widening of the girdle when giving birth/to absorb shock.	he (female) pelvic					
				(2 marks)					
	(b)	Allows passage of blood vessels/nerves/ and muscles; (1 mark)							
	(c)	(i)	Femur;	1 mark					
		(ii)	Ball and socket;	· 1 mark					
	(d)	Coccyx;							
6.	(a)	See graph on the next page.							
	(b)	(i) No change in population/population is constant; mice still maturing/have not given birth;							
				(2 marks)					
		(ii)	Slow/gradual population growth; few mice have reached sexual maturity; (2 marks)						
		(iii)	Faster/rapid rate of population growth/exponential; Many mice sexually matured/reproducing/enough food/space/no competition/ birth rate higher than death/no diseases: (2 marks)						
		(iv)	Population decline; Competition is high / food is limiting / space is limiting/accumwaste/disease (outbreak) deathrate higher than birth rate.	nulation of toxic					
			waste/disease (outoreak) deathrate higher than onth rate.	(2 marks)					
	(c)	(i)	6 and 8 ;	(1 mark)					
		(ii)	310 - 115 = 195 mice per month;						
			the state of the s	(2 marks)					
	(d)	Population would increase; (1 mark							
	(e)	Food; space; cage size; water; (max) (2 marks)							

7. (a) When a blood vessel is cut/injured platelets/thrombocytes/damaged tissue/wound is exposed to the air; they release thrombokinase/thromboplastin; an enzyme that activates the conversion of prothrombin; to thrombin; in the presence of calcium ions; vitamin K/ phylloquinone; is needed for the formation of prothrombin; Thrombin converts (soluble blood protein) fibrinogen; into (the fibrous form) fibrin; which forms a mesh / network across the wound; The clot so formed prevents excessive bleeding; and entry of disease agents/pathogens/micro-organisms/microbes;

Max 10 marks

- (b) Many to provide a large surface area; across which large amounts of gases diffuse; moist surfaces; to dissolve respiratory gases; so as to diffuse. Made of a thin membrane/epithelium/one cell thick wall; to reduce diffusion distance; Highly vascularized; to carry away oxygen; and bring in carbon (IV) oxide; creating a steep diffusion gradients. (10 marks)
- 8. (a) Regulation of blood sugar; when blood sugar is below normal/90 mg/100 cm³ glucagon; triggers the conversion of glycogen to glucose in the liver; the glucose is released into the blood stream. When blood sugar is in excess above normal/10 mg/100 cm³, insulin; causes the liver to convert glucose excess to glycogen; which is stored.

Production of heat energy; by increasing the rate of metabolic activities;

Excretion of bile pigments; produced due to breakdown of worn out red blood cells; Deamination/removal of amino group of excess amino acids to form urea; and detoxication/poisonous/toxic substances;

(Max 10 marks)

(b) Sweat glands excrete urea; excess water; and salts; hence maintaining salt & water balance in the blood. Evaporation of sweat; cools the body due to loss of latent heat of vaporization; when the body temperature rises; blood vessels in the skin vasolidate; allowing more blood to flow near the skin surface; thus heat is lost to the environment by radiation/convection. The erctor pili mucle relaxes hair flattens; in a hot environment reducing insulation; hence heat is lost from the body by radiation/convection; to the environment.

(max 10 marks)
