# MODEL07102022001 

Kenya Certificate of Secondary Education (K.C.S.E.)

## Chemistry Paper 3

Practical
TIME: $2 ¼$ HOURS

## INSTRUCTIONS TO THE CANDIDATES:-

- Write your name and index number in the spaces provided
- Answer all the questions in the spaces provided.
- Mathematical tables and silent electronic calculators may be used.
- All working MUST be clearly shown where necessary.
- Use the first 15 minutes of the $2 \frac{1}{4}$ hours to ascertain that you have all the chemicals and apparatus that you may need.

## For Examiners use Only

| QUESTION | MAX. SCORE | CANDIDATE'S SCORE |
| :---: | :---: | :---: |
| 1 | 14 |  |
| 2 | 10 |  |
| 3 | 16 |  |
| TOTAL SCORE | $\mathbf{4 0}$ |  |

This paper consists of 6 printed pages. Candidates should check to ascertain that all pages are printed as indicated and that no questions are missing.

## You are provided with:-

- Zinc powder, solid $\mathbf{S}$
- 0.5 M HCl , solution B.
- 0.25 M NaOH , solution $\mathbf{C}$
- Distilled water

## You are required to determine the :

(i) Number of moles of hydrochloric acid that remain unreacted.
(ii) Number of moles of zinc powder that reacted

## Procedure

Using a burette, measure $50 \mathrm{~cm}^{3}$ of solution $\mathbf{B}$ and place it in 100 ml beaker. Put all of the solid $\mathbf{S}$ in the $50 \mathrm{~cm}^{3}$ of solution B in the 100 ml beaker. Leave the content in the beaker to react for about 5 minutes. Filter the solution using filter paper and funnel into a 250 ml Volumetric flask and top up to the mark with distilled water: Lable this solution as solution D.

Empty the burette and fill it with solution $\mathbf{C}$. Pipette $25 \mathrm{~cm}^{3}$ of solution $\mathbf{D}$ and place it into an empty 250 ml conical flask. Add two drops of methyl orange indicator and titrate solution $\mathbf{C}$ against solution $\mathbf{D}$.
Record the result in the table 1 below. Repeat the titration of solution $\mathbf{C}$ against solution $\mathbf{D}$ and complete the table 1 below

|  | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| Final burette reading $\left(\mathrm{cm}^{3}\right)$ |  |  |  |
| Initial burette reading $\left(\mathrm{cm}^{3}\right)$ |  |  |  |
| Volume of solution C used $\left(\mathrm{cm}^{3}\right)$ |  |  |  |

(a) Calculate the average volume of solution $\mathbf{C}$ used
(b) Calculate the number of moles of:
(i) Sodium hydroxide used
$\qquad$
$\qquad$
$\qquad$
$\qquad$
(v)Hydrochloric acid that reacted with Zinc powder

## 2. You are provided with the following:

(i) $\quad 2 \mathrm{M}$ sodium hydroxide, solution $\mathbf{P}$
(ii) 2 M Hydrochloric acid, solution $\mathbf{Q}$

You are required to determine the molar enthalphy of neutralization of the acid using sodium hydroxide.

## Procedure

Measure exactly $40 \mathrm{~cm}^{3}$ of solution $\mathbf{Q}$ into a clean 250 ml plastic beaker.
Record the temperature of this solution in the table below. Measure $10 \mathrm{~cm}^{3}$ of sodium hydroxide solution, solution $\mathbf{P}$ and add it to the hydrochloric acid, solution $\mathbf{Q}$ in the plastic beaker. Stir with the thermometer and record the maximum temperature reached. Repeat the above procedure adding $10 \mathrm{~cm}^{3}$ portions of sodium hydroxide until the total volume of the solution is $100 \mathrm{~cm}^{3}$

| Volume of acid $\left(\mathrm{cm}^{3}\right)(\mathbf{Q})$ | 40 | 40 | 40 | 40 | 40 | 40 | 40 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Volume of $\mathbf{N a O H}$ added $\left(\mathrm{cm}^{3}\right)(\mathbf{P})$ | 0 | 10 | 20 | 30 | 40 | 50 | 60 |
| Temperature $\left({ }^{0} \mathbf{C}\right)$ of solution |  |  |  |  |  |  |  |

(a) Plot the graph of temperature rise ( $\mathbf{Y}$ - axis) against volume of sodium hydroxide added

From your graph;
(i) Determine the expected temperature rise $\Delta \mathbf{T}$
(iii) Calculate the molar enthalpy of neutralization for this reaction.
(take $\mathrm{C}=4.2 \mathrm{kJkg}^{-1} \mathrm{k}^{-1}$, density of solution $1 \mathrm{~g} / \mathrm{cm}^{3}$ )
3. You are provided with solid $\mathbf{W}$ and solution $\mathbf{K}$. You are required to carry out the tests prescribed in solid $\mathbf{W}$ and solution $\mathbf{K}$. Write your observation and inferences accordingly.
(a) Place all solid $\mathbf{W}$ in a boiling tube
(i) Add about $10 \mathrm{~cm}^{3}$ of distilled water to solid $\mathbf{W}$, and shake

| OBSERVATION | INFERENCE |  |  |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  | $(1 \mathrm{mk})$ |  | $(1 \mathrm{mk})$ |

ii) Divide the product in (i) into four equal portions. Add 5 drops of 2 M sodium hydroxide solution to the first portion

| OBSERVATION | INFERENCE |  |
| :--- | :--- | :--- |
|  |  |  |
|  | $(112 \mathrm{mk})$ |  |
|  |  |  |
|  |  |  |

(iii)Add 2-3 drops of lead (ii)nitrate solution to the second portion.

| OBSERVATION | INFERENCE |  |
| :--- | :--- | :--- |
|  |  |  |
|  | $(1 / 2 \mathrm{mk})$ |  |

(iv) To the third portion, add 2-3 drops of barium (ii) chloride provided followed by 5 drops of 2 M hydrochloric acid. Shake the mixture well.

| OBSERVATION | INFERENCE |
| :--- | :--- |
|  |  |
|  | $(1 \mathrm{mk})$ |

(v) Add 5 drops of acidified potassium dichromate (vi) to the fourth portion
OBSERVATION $\quad$ INFERENCE

|  |  |
| :--- | :--- |
| $(1 \mathrm{mk})$ |  |

(b)(i) To about $2 \mathrm{~cm}^{3}$ of solution $\mathbf{K}$, add few drops of sodium hydroxide till in excess.

| OBSERVATION | INFERENCE |
| :--- | :--- |
|  |  |
|  | $(1 \mathrm{mk})$ |

(ii)To about $2 \mathrm{~cm}^{3}$ of solution $\mathbf{K}$, add 2-3drops of Barium chloride solution

| OBSERVATION | INFERENCE |  |
| :--- | :--- | :--- |
|  |  |  |
|  | $(1 \mathrm{mk})$ |  |

(iii) To about $2 \mathrm{~cm}^{3}$ of solution $\mathbf{K}$, add $2 \mathrm{~cm}^{3}$ of bromine water provided

| OBSERVATION | INFERENCE |
| :--- | :--- |
|  |  |
|  | $(1 \mathrm{mk})$ |

(iv) To about $2 \mathrm{~cm}^{3}$ of the solution $\mathbf{K}$, add 2-3 drops of lead (ii) nitrate solution.

| OBSERVATION | INFERENCE |
| :--- | :--- |
|  |  |
|  | $(1 \mathrm{mk})$ |
