

# WHAT ARE THE MERITS OF A DESKTOP OVER A LAPTOP?

---

Since 2003, the sales of laptops and other small computing devices has surpassed the sales of desktop computers, however desktop computers are still fighting for a share in the computing world even though it is of micro-manageable scale - thanks to their merits and capabilities that other consumers fancy.

## Why do some people prefer desktops computers to laptops computers then?

### **Desktop computers are easily upgradable**

Desktop computers are equipped with extension slots that allows consumers to easily upgrade its hardware and add more features that they lack.

### **Desktop computers suit network host tasks**

Because of their bulk, desktop computers are stationery which makes them more suitable to host networks. They also have a large surface area to connect other peripheral devices.

### **Desktop computers have more enhancements and room for improvement**

They host a number of ports of various types

### **Desktop computer's spare parts are cheap to acquire**

Desktop spare parts are easily available and cheap to acquire as compared to laptop computers

### **Because of its bulky, desktop computers are better suited in doing office work**

### **Troubleshooting desktop's hardware is easier than laptop's**

### **Programmers prefer desktop computers because its hardware capabilities are flexible.**
